VINYL WALLCOVERING - CARE AND MAINTENANCE

Proper care and maintenance will extend the useful life of your vinyl wallcovering and help maintain its original beauty and finish.

- Remove dirt and grime regularly by vacuuming to prevent accumulation.
- Remove stains as quickly as possible to prevent reactions or permanent discoloration.
- Clean with mild soap and warm water; dry with a soft, lint-free cloth or towel.
- Depending on traffic, spot cleaning and soft-bleach cleaning may be carried out once or two to three times a year.

DO

- Use mild soap and warm water for ordinary dirt and smudges.
- Use a soft-bristle brush if needed for deeply textured patterns.
- Pay extra attention to embossed surfaces so loosened dirt or suds do not remain in grooves.
- Test all cleaners first in an inconspicuous area to check compatibility.
- Dry the wallcovering with a soft, lint-free cloth or towel.

DON'T

- Do not spray wax or other protective coatings onto the wallcovering.
- Do not use isopropyl alcohol, powdered abrasive cleaners or steel wool.
- Do not use active-solvent cleaners such as nail-polish remover, tar remover or bug remover; these may damage the print or finish.
- Avoid leaving color- or solvent-containing stains (e.g., ink, shampoo, tints or foodstuffs) on the surface.

With proper care and attention, vinyl wallcoverings will remain beautiful and serviceable for years.
